

## Software Engineer III Infrastructure Privacy Sandbox - Poland

[Apply Now](#)

Company: Google

Location: Odesa

Category: other-general

### About the job

**Google's software engineers** develop the next-generation technologies that change how billions of users connect, explore, and interact with information and one another. Our products need to handle information at massive scale, and extend well beyond web search. We're looking for engineers who bring fresh ideas from all areas, including information retrieval, distributed computing, large-scale system design, networking and data storage, security, artificial intelligence, natural language processing, UI design and mobile; the list goes on and is growing every day. As a software engineer, you will work on a specific project critical to Google's needs with opportunities to switch teams and projects as you and our fast-paced business grow and evolve. We need our engineers to be versatile, display leadership qualities and be enthusiastic to take on new problems across the full-stack as we continue to push technology forward.

With your technical expertise you will manage project priorities, deadlines, and deliverables. You will design, develop, test, deploy, maintain, and enhance software solutions.

The Privacy Sandbox initiative aims to create technologies that both protect people's privacy online and give companies and developers tools to build thriving digital businesses. Our team is dedicated to strengthening the Web and Android platform against tracking and fingerprinting,

while also developing new privacy-preserving APIs to support personalization and measurement on the web. We are committed to collaborating with stakeholders in the industry to develop and implement viable, alternative solutions in a way that protects the privacy of users while also ensuring the continued vitality of the web.

### **Responsibilities:**

Write product or system development code.

Participate in, or lead design reviews with peers and stakeholders to decide amongst available technologies.

Review code developed by other developers and provide feedback to ensure best practices (e.g., style guidelines, checking code in, accuracy, testability, and efficiency).

Contribute to existing documentation or educational content and adapt content based on product/program updates and user feedback.

Triage product or system issues and debug/track/resolve by analyzing the sources of issues and the impact on hardware, network, or service operations and quality.

### **Minimum qualifications:**

Bachelor's degree or equivalent practical experience.

Candidates will typically have 2 years of experience with software development in one or more programming languages, or 1 year of experience with an advanced degree.

Typically 2 years of experience with data structures or algorithms in either an academic or industry setting.

Typically 2 years of experience building and developing large-scale infrastructure, distributed systems or networks, and/or experience with compute technologies, storage, and/or hardware architecture.

## Preferred qualifications:

Master's degree or PhD in Computer Science or related technical fields.

Experience developing accessible technologies.

**Health and Wellbeing** (Medical, dental, and vision insurance for employees and dependents)

**Financial wellbeing** (Competitive compensation, regular bonus and equity refresh opportunities)

**Flexibility and time off** (Paid time off, including vacation, bereavement, jury duty, sick leave, parental leave, disability, and holidays)

**Family support and care** (Fertility and growing family support, parental leave and baby bonding leave)

**Community and personal development** (Educational reimbursement)

**Googley extras** (Inspiring spaces to work, recharge, and collaborate with fellow Googlers)
